

Aria Conference Bridge is a highly versatile system, which can be configured to suit, any conferencing requirements of a business center, hospital, or large Corporate Organization. It is a digital ISDN Switch capable of handling transmission of Voice, Data, Text and Facsimile.

Technical Specification

Aria CB series is a digital communication switching system available in a variety of configurations. The system is based on Time Division Multiplexing (TDM), Pulse Coded Modulation (PCM) switching technology. Advanced CMOS chips are used to ensure optimum processor speed and minimum power utilization. It is a micro controller based system with distributed processing. Each card in the system has a PTC (Positive Temperature Coefficient) to ensure protection to the cards and also to act as an auto reset table fuse. Each card in the system is provided with an SMPS to convert 28V DC to its own operating & logic voltages. The system has a combination of active and passive bus to ensure reliable communication between the cards. All the cards are plug in type to ensure ease of maintenance

Conferencing Capacity

Aria CB has the capacity to establish 64 party conferences at a time with any permutation combination. Further 64 party can be divided into multiple group as per customer requirement.

Capacity to connect :248 ports maximum ISDN PRI -02, FXS/ FXO 240

Adopt it today and tomorrow, it will be the backbone of your enterprise.
